

Intelligent Food Processing

Enhanced control and efficiency with data driven performance

- Monitor process control to ensure consistent product quality.
- Preserve historical data for traceability and improvement.
- Streamline troubleshooting via remote connectivity.
- Reduce food and cryogen waste with data-driven insights.
- Identify process deviations with continuous monitoring.
- Optimize gas consumption to maximize operational efficiency and reduce costs.

Unlock unprecedented visibility and control over your operations

In today's competitive food market, consistency, safety, and efficiency are paramount. Airgas, an Air Liquide company, goes beyond supplying high-quality food-grade gases by offering our new Connected Services platform—a direct answer to the industry's move toward data-driven automation.

By leveraging secure cellular connectivity and an intuitive cloud-based dashboard, we put the power of data directly into your hands, transforming your equipment into an intelligent, responsive asset.

Connected Services for Equipment

Your Process, Visualized and Optimized

Optimize Process Control	Preserve Historical Data	Secure Remote Diagnostics
 <p>Our connected platform gives you continuous visibility into key parameters like temperature, dwell time, fan speeds, and gas consumption. Compare set points to actual values to fine-tune your process, ensuring optimal performance, reducing energy costs, and helping to maintain product quality specifications.</p>	 <p>Process data is securely logged in the cloud, creating an invaluable historical record of your operations. Use this data to analyze trends, identify patterns, streamline diagnostics, and provide stakeholders with robust traceability records when needed.</p>	 <p>With our Connected Maintenance service, enable authorized Airgas experts to view your equipment status remotely when assistance is needed. By sharing real-time system views without the need for immediate site visits, we can collaborate on diagnostics more efficiently, eliminating the guesswork from troubleshooting.</p>

The Connected Dashboard: Your Window to Efficiency

Our connected dashboard provides a clear, customizable, and user-friendly visual interface to monitor your operations from anywhere.

Secure Cloud Access: Data is automatically transmitted to a secure database.

Custom Visuals: Track key performance indicators (KPIs) with graphs, charts, and clear status indicators.

Multi-equipment View: Monitor multiple Airgas Cryo Tunnel Freezers from a single interface.

Fill Your Potential.™
