

EZ-GAZ[™]

Visibility, control, savings for gas

- Reduce run-out risks and rush delivery costs with real time gas monitoring and low-pressure alerts
- Minimize valuable time and personnel resources spent on point-of-use gas pressure monitoring and order management
- Avoid gas waste and enhance operational performance with optimized gas supply modes and equipment upgrades engineered by our experts
- Improve forecasting using the EZ-GAZ digital platform to follow the evolution of your gas consumption

Make gas supply easy

Managing gas supply is a small part of your overall operation, however, it can be time consuming. Your daily challenges may include estimating how much gas is left in your tank and when to reorder, overstocking or exchanging early to avoid runouts, and spending too much time manually tracking gas levels and switching-out cylinders. All of these routine tasks prevent you from focusing on your core activities, while adding substantial waste and unnecessary costs.

As part of the Airgas Supply Chain Solutions, EZ-GAZ is a new and unique digital gas monitoring service that helps you optimize and monitor your gas supply — get peace of mind with simply knowing what you have now and when you need more.

EZ-GAZ™

Know how much gas you have and when you'll need more

Monitor gas content levels in real-time and at your convenience

- Get instant and accurate gas content data
- Reduce frequency of pressure checks on cylinders and tanks
- Avoid unnecessary field inspections with remote online contents visibility

Get automatic alerts when your preset gas pressure level is detected, no matter where you are

- Simplify gas ordering and replenishment on Airgas.com
- Improve inventory management with accurate change out forecasting and reliable supply
- Limit gas waste with improved supply solutions

Optimize your gas supply and delivery equipment for your operation

- Tap into Airgas expertise to determine the best supply mode and equipment: cylinders, packs, MicroBulk and bulk tanks, and more
- Multiple configurations are available for cylinders—from single to packs with automatic changeover panels. Custom configurations increase safety, reduce waste and minimize changeouts. Systems can be fully configured on regulators and changeover manifolds before arriving at your operation

Access gas pressure levels throughout your installation, wherever and whenever

- Identify excess gas use and address operational issues with accurate usage and consumption data using the secure Airgas portal

How EZ-GAZ works

Installation of EZ-GAZ is simple and quick—this digital system requires no wiring and is compliant with current FCC regulations and codes. Once installed, your data is safely collected and securely transmitted to your account, with real-time access that immediately improves the way you manage your gas supply.

Measure the pressure of your gas supply

Transmit your gas data securely
