Safety Beyond Products
iMSafe™ on-site safety assessment

Our QSSP-certified safety specialists will:

• Perform a safety assessment of your worksite
• Identify safety hazards and potential violations
• Provide you with a detailed report documenting our findings
• Recommend cost-saving strategies for improvement

Reduce loss and improve safety

Injuries on the job and safety violations cost companies millions of dollars each year. Keeping your team safe and helping you avoid costly fines are top priorities for Airgas, an Air Liquide company.

That’s why we’ve invested in the capabilities of our safety team to continue taking safety beyond products. With more than 70 QSSP-certified safety specialists, we are uniquely positioned to do more than just sell you products. Our team works hand-in-hand with you to improve your internal safety program, reduce injuries and keep you compliant with OSHA and industry regulations.
iMSafe™
On-site safety assessment

We offer a variety of surveys and inspections designed to help you improve safety in your workplace. You identify the area that you would like your safety specialist to evaluate or we can recommend specific assessments to be performed based on your business.

Surveys and assessments
- Implementation surveys
- Crib crawl
- Hand protection assessments
- Efficiency calculator tool for PAPR and supplied air applications
- Tools and machinery surveys

Inspections
- Fall protection equipment
- Eyewash and emergency showers
- Ladders
- AEDs

Evaluating your results
With an iMSafe on-site safety assessment, you get the information you need to improve safety for your business. After receiving your detailed report with our findings, we'll discuss the results and provide recommendations for improvement. In addition to helping you take immediate action to eliminate hazards and comply with OSHA regulations, we'll help you outline a plan with procedures you can implement to help avoid costly incidents in the future.

We'll also store your data so we can help you track important details about your safety program in a single location. Your safety specialist will create a record of your program and provide you with observations related to safety within your facility. It's a seamless way for Airgas to help you stay on track, maintain compliance and keep your team safe.

Ask your safety specialist for more information and schedule an iMSafe on-site safety assessment today.
