**Walk-O2-Bout® Heliox Portable System**

**AVAILABLE FOR IMMEDIATE CARE AND CONTINUED TREATMENTS IN THE ER**

**PORTABLE TREATMENT FOR ASTHMA AND COPD**

Walk-O2-Bout Heliox, from Airgas Healthcare, is an easy-to-use helium and oxygen delivery system with a built-in regulator. It provides a consistently blended mixture available as 80/20 or 70/30 helium and oxygen in an all-in-one aluminum cylinder. Heliox is lightweight and comfortable to carry allowing first responders to easily access and administer heliox directly to the patient and through a nebulizer.

The unique dual delivery regulator has two delivery ports. The direct-to-patient port has flow rates of 1–20 lpm. The other administers heliox to a drive nebulizer at a preset flow rate of 11 lpm. The mixture of helium and oxygen provides improved airway flow when used in conjunction with a traditional nebulizer. In a convenient size for hospital use (providing more than 2.5 hours of treatment) or in our portable Walk-O2-Bout Heliox model, Heliox means fast, reliable flow for better acute asthma and COPD intervention.

**MORE ACCESSIBLE FOR TREATMENT OF YOUR PATIENTS**

Walk-O2-Bout Heliox products from Airgas Healthcare are a safe and noninvasive solution for treatment of asthma patients. With the option of smaller size cylinders requiring less storage space, medical personnel have easier access to heliox for their patients.

The Heliox has been shown to have beneficial effects within the first hours of treatment of asthma attacks in reducing the resistance of airways in many patients providing improved airway flow when added to a traditional nebulizer. During controlled testing, jet nebulization of albuterol with heliox has been found to improve the spirometric measurements of asthma patients over those receiving treatment with oxygen. Airgas offers Heliox in two sizes — an E-size cylinder for ambulances as well as an M-size for continued treatment in the ER — making it another choice we can offer you.

The right location. The right product. The right expertise. You’ll find it with Airgas.

The Walk-O2-Bout® family of products

FOUR OXYGEN MODELS TO MEET YOUR NEEDS

- Walk-O2-Bout Oxygen
- Walk-O2-Bout for First Responders has the gauge, flow setting and oxygen outlet port all on the same side for easy administration and easier monitoring.
- Walk-O2-Bout Pediatric with flow settings of 0-4 lpm
- Walk-O2-Bout MRI Compatible with non-magnetic handle, screws and springs, an aluminum cylinder, and regulator head that meets MRI compatibility tests

CONVENIENCE YOU CAN COUNT ON

When your patients need oxygen, air or heliox, they need it now. The Walk-O2-Bout system from Airgas helps you get oxygen, air or heliox faster than any other dispensing equipment. It’s always ready when you are.

QUALITY YOU CAN FEEL

Rugged construction allows the regulator to take some bumps and the heavy-duty handle provides extra protection. An easy-to-read gauge allows for convenient monitoring of oxygen, air, and heliox contents. The complete Walk-O2-Bout family offers expanded flow control range from 0 to 25 lpm (pediatric oxygen model 0-4 lpm) for maximum versatility.

COST SAVINGS THAT ADD UP

Because the regulator is built into the cylinder in all the Walk-O2-Bout® products, there’s no need to inventory, repair or replace regulators. This reduces maintenance and administrative costs, and ensures that every unit you receive is usable and profitable.

THE RIGHT DELIVERY SYSTEM FOR YOU

Whether you’re buying oxygen, air or heliox for a hospital or for emergency medical care, the Walk-O2-Bout family of products was designed with you and your patients in mind. Walk-O2-Bout products are the ultimate portable system, offering heavy-duty durability in a convenient lightweight package. They are uniquely designed for effortless cleaning and removal of any blood-borne pathogens.

SAFETY THAT’S BUILT IN

The same integrated design features that make the Walk-O2-Bout products so simple to use also creates the safest oxygen and heliox dispensing systems on the market. Within the regulator, Airgas employs NASA-recommended material designed to perform safely in a pure oxygen environment and a built-in relief valve that increases safety for storing and daily operation. A sturdy stainless steel (non-magnetic for the MRI model) handle and no removable parts help users to transport the cylinder safely. Every Airgas Walk-O2-Bout has the built-in patented ESSEX Flame Arrestor (designed to stop, limit or protect potentially combustible mixtures from igniting).

WALK-O2-BOUT
Oxygen, Air and Heliox Portable Dispensing Systems

Fast, easy and always ready when you are.

Walk-O2-Bout all-in-one lightweight cylinder, handle and regulator—in six different models. You’ll find it with Airgas.

The Walk-O2-Bout family of products from Airgas Healthcare, an Air Liquide company, is an innovative solution to issues that first responders and healthcare practitioners face when providing respiratory care to patients. Walk-O2-Bout lightweight cylinders with built-in regulator, 50 psi DISS outlet and wide permanent handles make it easy to lift and carry anywhere. The optional swivel oxygen port with 90 degrees of range provides increased movement. A streamlined design that incorporates everything you need into one integrated easy-to-carry unit—you’ll find it with us.
